Pest Control Prep Sheet

Triangle Pest Control is one of the top **pest control exterminators** in the **Raleigh Durham** area.

Our company has been rated the #1 pest control service provider by our customers. We believe that this rating is because we offer excellent customer service and we solve our customer's pest, mosquito and termite issues cost effectively.

Our company has developed a series of customer preparation sheets that you can use to get the most from our service. Of course, there is no requirement that you complete this checklist prior to our arrival; however, we have found that the customers who do complete this checklist get the maximum benefit of our service.

Items to complete prior to our arrival

- DO** pickup all children toys and store away from areas that will be treated
- DO** move pets to an area of the home that will not be treated (prior to application)
- DO** move all birds away from the treatment area
- DO** cover fish bowls or fish tanks
- DO** store or cover all food
- DO** be prepared to leave if necessary. In most cases you do not need to leave during the treatment; however, it never hurts to be prepared should you need to
- DO** secure any private, valuable, or important items. We will be going through your entire home
- DO** be prepared to make payment. We require payment at the time of service
- DO** plan to be at your home if we are performing an initial service or a one-time treatment.

After our treatment

- DO** allow at least 15-30 minutes for the treated areas to dry
- DO** expect to see some insects after we treat. We use non-repellents (for insects such as ants and roaches). Seeing these insects after we treat is completely normal and desirable. The goal with non-repellents is to transfer the materials to the entire colony and thereby eliminating not only the insects that you see but also the insects that you don't see (e.g. the entire colony)
- DO NOT** clean the areas that we treat immediately
- DO NOT** use other materials (over the counter products)

Tips to help keep your home stay pest free

- Cut away tree limbs and foliage so that no limbs or branches are touching your home
- Store pet food in sealable containers
- Try to avoid leaving food out for extended periods of time
- Keep your gutters clean and free from debris
- Do not store firewood around or against your home
